

BACKUP & DISASTER RECOVERY

Natural and man-made disasters are inevitable. We offer flexible and scalable solutions to protect your critical data and applications. FOGO can customize a strategy to meet your organization's RTO (Recovery Time Objective) and RPO (Recovery Point Objective) parameters.

STASHPRO LOCAL BACKUP

StashPro Local Backup provides clients with an on-site backup solution. We back up locally to an NAS (Network Attached Storage) Device. This protects your data and allows you to recover from a virus, accidental deletion of files, a corrupt database, or unstable operating system. It does not protect you from a disaster such as a fire, flood, tornado, hurricane, or earthquake.

STASHPRO CLOUD BACKUP

StashPro Cloud Backup provides clients with an off-site solution backed up to one of FOGO's secure facilities over the internet. This type of set-up is an agent-based backup that is encrypted in transit; thus, ensuring your data is safe. A single agent is installed on a server in your environment that connects your servers to our cloud-based backup portal.

STASHPRO HYBRID BACKUP

StashPro Hybrid Backup provides clients with both a local and cloud based backup solution. This solution leverages the speed and agility of a local backup recovery. Additionally, it offers the security and peace of mind of an offsite backup. Clients also have the option to recover their data into a cloud based solution. Our hybrid backup option is helpful in the event of a natural disaster and provides a true disaster recovery scenario.

STASHPRO GEO CLOUD BACKUP

StashPro Geo Cloud Backup provides clients whose data currently resides in one of our data centers with an inter-data center backup on dissimilar hardware. We also include a replicated backup to one of FOGO's other facilities. This scenario protects your data from a single hardware failure. In addition, it protects from a natural disaster that could affect one of our hardened facilities.
