# DON'T LET A CYBER ATTACK CRIPPLE YOUR BUSINESS

## SMALL TO MID SIZE BUSINESSES ARE NOW PRIME TARGETS. A SINGLE BREACH COULD HALT YOUR OPERATIONS.

As an MSSP, we offer immediate expertise, ongoing threat detection, and response to prevent harm to your business and its data. This can provide you with improved efficiency, lower costs, and support, especially during critical times. Our goal is to empower organizations to respond swiftly to threats, leverage advanced cybersecurity technology, and maintain detailed audit trails.

### MFA (Multi-Factor Authentication)

Stop unauthorized access before it starts.

### EDR (Endpoint Detection & Response)

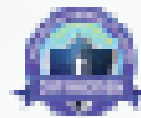

Detect and contain threats at the device level.

### RMM (Remote Monitoring & Management)

Ensure systems are updated, monitored, and secure 24/7

### SIEM (Security Information and Event Management)

Monitors your network in real time, detects suspicious activity, and alerts our team before threats become problems

# CYBERSECURITY CHECKLIST

Don't leave your business open to attack. One missed step could cost everything.  
Stop threats before they start. Check it off!

## PRIVACY PROGRAM

- Internal privacy policy
- Employee training on the internal privacy policy
- Internal policy for data retention

## SECURITY PROGRAM

- Security awareness training of employees and contractors
- Phishing awareness training
- Clean desk policy
- Visitor program
- Identify digital assets
- Multi-factor authentication (MFA)

## SYSTEM HARDENING

- Clean up all unused programs on all systems
- Use group policies and active directory
- Secure endpoint configurations
- Implement perimeter security
- Patch management plan
- Monitor and track behavior in cloud apps

## TOOLS

- Virtual private network (VPN)
- Secure Wi-fi/wireless network
- Secure email gateway (SEG)
- System auditing
- Configure backup solution
- Test backup solution
- Domain name system (DNS) and content filtering
- Endpoint detection and response (EDR)
- Security incident and event management (SIEM)

## VULNERABILITY MANAGEMENT & ASSESSMENT

- Define a vulnerability analysis and resolution strategy
- Vulnerability and management program

## RESPONSE

- Incident response policy
- Incident response procedures
- Incident response roles and responsibilities
